PROFESSIONAL SUMMARY

Senior Full-Stack & Power Platform Developer with 3+ years of enterprise experience designing and building scalable business systems used by 300–500 internal users, alongside consumer-facing marketplace and healthcare platforms. Specialized in Microsoft Dynamics 365, Dataverse architecture, Model-Driven Apps, and advanced customization using TypeScript, React, and NestJS. Proven track record of leading end-to-end delivery of procurement, logistics, financial integration, telemedicine, and rental marketplace platforms—from stakeholder discovery through production deployment. Former banker with strong analytical thinking, business-driven problem solving, and cross-functional stakeholder management.

Core Focus: Dynamics 365 CE & FO | Dataverse | Power Platform | NestJS | React | Next.js | TypeScript | OData | Azure AD | Enterprise Architecture

TECHNICAL SKILLS

Microsoft Power Platform & Dynamics 365: Dynamics 365 CE & FO | Dataverse | Model-Driven Apps | Canvas Apps | Power Apps Studio | Power Automate | Xrm.WebApi | Xrm form scripts | Web resources | PCF Components | Power Fx | Plugin development (C#) | Solution ALM | Security roles | Business units | Teams | Approval workflows | Business process flows

Backend & Integration: NestJS | Node.js | Express | TypeScript | REST API design | OpenAPI/Swagger | CQRS | OData | Azure AD | Client credentials | JWT | API keys | BullMQ | Redis | Prisma | TypeORM | MongoDB | Mongoose | PostgreSQL | GraphQL

Frontend: React | Next.js | TypeScript | TanStack Query | TanStack Router | TanStack Table | React Hook Form | Zod | Valibot | Zustand | Redux | Tailwind CSS | Radix UI | shadcn/ui | Material UI | Bootstrap | Framer Motion | Vite | Webpack | i18next | next-intl | Axios

Data & Document: OData query design | Excel integration (exceljs, xlsx) | PDF generation (@react-pdf/renderer) | Master data sync | ETL pipelines | Batch processing | Financial dimensions

DevOps & Tools: Git | GitHub | Docker | Docker Compose | Postman | Swagger | Azure Portal | Figma | VS Code | Chrome DevTools | ESLint | Prettier | Jest | React Testing Library | Windows | Linux

PROFESSIONAL EXPERIENCE

Marine and Engineering Services Company (MESCO) | Senior Full-Stack & Power Platform Developer | Alexandria, Egypt | May 2025 – Present

Led the design, architecture, and end-to-end delivery of multiple enterprise internal systems on Microsoft Dynamics 365 and Dataverse, serving 300–500 internal users across procurement, logistics, and finance departments. Owned stakeholder workshops, technical planning, full-stack implementation, and production deployment.

MG Supply v3 — Procurement & Inventory Platform (Dynamics 365 / Dataverse + NestJS)

- Architected and built a full procurement lifecycle system covering Purchase Request → RFQ/Quotation → Purchase Order → Stock Management (adjustments, transfers, inter-warehouse, receiving) across multi-company / multi-BU scope.
- Designed Dataverse entity model with 38+ domain entities, relationships, security roles, and approval routing (Approval Step + Approval MOA).
- Developed C# Dataverse plugins (Pre/Post Operation, Associate/Disassociate) enforcing business invariants such as Purchase Request ↔ Quotation association guards and reusable delete-by-status guards.
- Built NestJS 11 orchestration API with CQRS command handlers, 3 BullMQ workflow queues (parallel + sequential), multi-layer cache (L1 in-memory + L2 Redis), and typed REST surface with Swagger/OpenAPI documentation.
- Created TypeScript web resource bundle (IIFE) exposing 14 window.MGSupply namespaces for Xrm form scripts, commands, and subgrid behaviors in the model-driven app.
- Delivered 14 React satellite views/PDFs including send RFQ (Microsoft Graph mail integration), technical confirmation, generate PO, approval step UI, and bulk import tooling.
- Implemented custom ticket-based authentication aligned with Dataverse security, plus API key guards for admin/automation routes.
- Reduced manual PR→PO handoffs and email-based approval chains by digitizing workflows in Dataverse with server-enforced validation and queue-based processing.

MG Operation — Freight Forwarding & Logistics Platform (Dynamics 365 + NestJS)

- Delivered end-to-end logistics operations system on Dynamics 365 CE integrated with D365 Finance & Operations, covering quotation → operation, cost/sales grids, customer/vendor invoicing, payment requests, settlements, and compliance documents.
- Built a shared TypeScript Dataverse/XRM client library supporting dual runtime (browser DataverseModel + Nest DataverseService) with typed query builder, mapper, CRUD, associate/disassociate, and bulk/batch delete operations.
- Created 25+ shipping/finance PDF templates using @react-pdf/renderer (Air Waybill, B/L, manifests, release letters, payment requests, claims, IMO reports) with Arabic amount wording (tafgeet-arabic) and shared component framework.
- Developed 14 React HTML web resource views (single-file Vite builds) for operation cost/sales hub, quotation conversion, invoice/settlement wizards, container/house/cargo management, and advanced search.
- Built NestJS backend with 22 controllers, D365 F&O OData facades (free-text invoice, vendor invoice, payment request, customer/vendor sync), and Nafeza ACID compliance integration.
- Registered 13 window.MGOperation namespaces on the model-driven app for form locking, ACID verification, container–house N:N management, and invoice generation commands.
- Established multi-auth strategy: API tickets for users, JWT client-credentials for integrations, API keys for admin routes.

D365FO Middleware — ICT-to-D365 FO Migration Platform (NestJS + React)

- Led solo delivery of a full-stack finance integration middleware replacing manual ICT → D365 Finance & Operations data re-keying with automated batch processing.
- Architected NestJS 11 API with 14 feature modules, CQRS handlers, 5 BullMQ queues, and 4 D365 FO posting strategies (free-text invoice, vendor journal, ledger journal, customer payment journal).
- Implemented 16 entry processors (factory pattern) covering AR, AP, cash, and closing domains for freight and trucking product lines, with batch validation, enrichment, and structured error reporting.
- Built multi-layer resilience stack: circuit breaker (opossum), axios-retry, Redis + MongoDB cache fallback, and rollback/compensating action service for partial D365 posting failures.
- Designed and built React 19 operator dashboard with TanStack Router, TanStack Query, Excel drag-drop upload, batch wizards, error review tables, and Post-to-DFO flows per finance module.
- Achieved batch processing of 1,000+ lines per upload with chunked header/line posting, voucher integrity (no split vouchers), and dimension validation against cached master data.
- Reduced manual data entry from approximately 50 hours per 1,000-line file to 2–5 hours (upload + review + post), saving an estimated 85–95+ hours per month at steady-state volume.
- Deployed via Docker multi-stage builds with Docker Compose dev/production configurations and remote SSH deployment scripts.

Frontend Development & Internal Tooling

- Built a reusable React + Vite + TypeScript library to accelerate Power Apps development, standardizing Xrm API patterns, custom pages, and web resource delivery across teams.
- Refactored legacy modules to improve scalability, UI consistency, and maintainability.
- Delivered multiple Canvas Apps and Model-Driven Apps aligned with real business operations and approval workflows.

Profound | Frontend Developer | Alexandria, Egypt | July 2024 – December 2025

Developed and optimized high-performance Next.js applications for healthcare and marketplace products, achieving 90+ Lighthouse scores in performance and accessibility. Built dynamic, interactive user interfaces with strong focus on UI/UX best practices, responsive design, and accessibility standards. Collaborated with designers and backend developers in an Agile environment to deliver smooth, responsive user experiences.

Spectra Client — Bilingual Telemedicine Platform (Next.js 14 + SignalR + VideoSDK)

- Built a bilingual (Arabic/English, RTL) telemedicine frontend for a pediatric developmental and behavioral care platform serving four role-based dashboards: Admin, Doctor, Organization, and Client.
- Architected role-scoped Axios API instances and 119+ React Query hooks aligned with backend segmentation (/admin, /doctor, /client, /organization, /employee).
- Implemented real-time features via SignalR hubs: notifications, chat, appointment session lifecycle, and in-meet clinical events (prescriptions, documents, diagnoses, recommendations).
- Developed VideoSDK-based telehealth meeting rooms with split doctor/client layouts, waiting room, participant controls, and dynamic side panels updated live via SignalR.
- Delivered 300+ App Router pages across public marketing, auth flows, four dashboard personas, and dedicated /meet/[appointmentId] telehealth experience.
- Built complex form workflows with React Hook Form + Zod: family/org multi-step registration, contract and revenue-share percentage rules, employee invoicing with bank fields, and admin main-data CRUD.
- Implemented JWT cookie-based authentication with Next.js middleware route guards that block cross-role URL access and redirect based on contract status.
- Created 19+ transactional HTML email templates (OTP, appointments, contracts, receipts) and integrated Vercel Analytics/Speed Insights.

We Rent / OkoRent — Peer-to-Peer Rental Marketplace (Next.js 16 App Router)

- Delivered the frontend for a B2C/B2B rental marketplace connecting lessors and lessees for non-real-estate goods (electronics, tools, vehicles, party equipment).
- Built 26+ App Router pages across public marketing, discovery, auth flows, and lessor dashboard using Next.js 16 App Router with route groups ((public), (auth), user).
- Implemented compound Product component architecture for listing detail pages featuring gallery, tiered pricing (daily/weekly/monthly), calendar, owner card, price breakdown with service fee, map pickup pins (pigeon-maps), and reviews.
- Developed responsive data tables with selection, status badges, and row actions for the lessor My Listings dashboard using TanStack Table with auto-switching table/card views.
- Created multi-section add-listing form with image uploader (drag/drop, previews), pricing tiers, availability dates, stock, FAQs repeater, and security deposit configuration.
- Integrated REST APIs via centralized Axios service layer with JWT session handling, AuthBoundary progressive hydration pattern, and typed route navigation.
- Implemented internationalization with next-intl (English live, structure-ready for additional locales) and i18n-aware form validation using Valibot + React Hook Form.
- Applied performance optimizations: Turbopack, React Compiler, lazy loading, code splitting, dynamic imports for maps, and @next/bundle-analyzer monitoring.

General Contributions

- Integrated RESTful APIs and WebSockets/SignalR to enable real-time data synchronization between frontend and backend services.
- Implemented performance improvements using lazy loading, code splitting, Turbopack, React Compiler, and efficient caching strategies.
- Enhanced application security using Next.js Middleware and JWT authentication to ensure secure user access.
- Followed UI/UX and accessibility standards to deliver clean, user-friendly interfaces across all products.

Freelance | Frontend Developer | Alexandria, Egypt | November 2023 – July 2024

- Built and deployed web applications using Next.js, React, and TypeScript for B2C and B2B clients.
- Developed full-stack features using REST/GraphQL APIs with state management via Redux and Zustand.
- Applied performance optimizations such as lazy loading, code splitting, and caching.
- Implemented authentication and authorization flows using NextAuth and JWT.
- Followed UI/UX and accessibility standards to deliver clean, user-friendly interfaces.

Banque Misr | Banker | Alexandria, Egypt | April 2018 – September 2023

- Offered personalized financial advice to clients on investments and savings management.
- Addressed customer service inquiries and resolved issues to maintain strong relationships.
- Developed analytical and problem-solving skills that enabled a successful transition to software development.
- Managed financial transactions and customer accounts, providing tailored banking solutions.

EDUCATION

Bachelor of Business Administration (BBA) — Faculty of Commerce (English Section), Alexandria University, Egypt | 2017

CERTIFICATIONS & TRAINING

- Dataverse Deep Dive | Power Apps Development (Udemy) — May 2025
- NestJS (Udemy) — February 2025
- Node.js (Udemy) — January 2025
- Object-Oriented Programming in JavaScript (Udemy) — October 2024
- Modern PHP (Udemy) — June 2024
- React.js (Udemy) — March 2024

ADDITIONAL INFORMATION

Languages: Arabic (Native) | English (Professional Working Proficiency)

Availability: Open to remote, hybrid, and on-site opportunities in Egypt and internationally.
